

DATA SHEET

DFM OnDemand Solution

 **DFM OnDemand**

DFM OnDemand delivers the power of Dataflow Manager with leading eClinical technologies from our Adapt technology program as a preconfigured solution. Many small to mid-sized organizations look primarily to outsourced services and technology for managing clinical trials. With this comes the challenge of a lack of control and visibility into the status of their trials.

By delivering Dataflow Manager and associated Adapt Member technologies as an integrated solution, clients benefit from a rapid, cost effective start-up. Clients can choose to use one or more of the Adapt Program technologies to create a cloud enabled eClinical suite without the investment of in-house technology or resources. With Dataflow Manager as the central interface, customers can retain a level of control and visibility that has until now been the domain of larger organizations, and access it on demand.

- ▶ Benefits of Dataflow Manager for one study or one program
- ▶ Real-time operational intelligence across outsourced systems
- ▶ Cost effective, rapid start-up
- ▶ Best-in-class technologies, in the Cloud
